

Install ArgoUML on Linux

Author : Vijani Supeshala Piyawardana

Download ArgoUML-0.34.tar.gz from:

<http://sourceforge.net/projects/argouml.mirror/>

<http://argouml.tigris.org/>

Welcome to ArgoUML

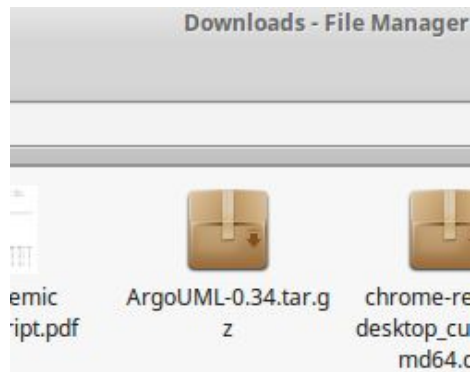

ArgoUML is the leading open source UML modeling tool and includes support for all standard UML 1.4 diagrams. It runs on any Java platform and is available in ten languages. See the [feature list](#) for more details.

ArgoUML 0.26 and 0.26.2 were downloaded over 80,000 times and are in use all over the world. See the [download statistics](#).

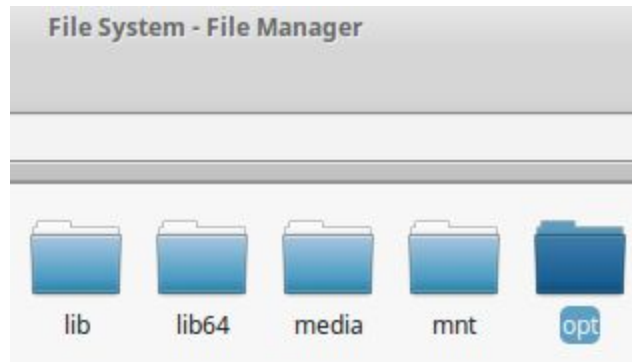

ArgoUML is distributed under the [Eclipse Public License \(EPL\) 1.0](#).

Downloaded file (in my file browser)

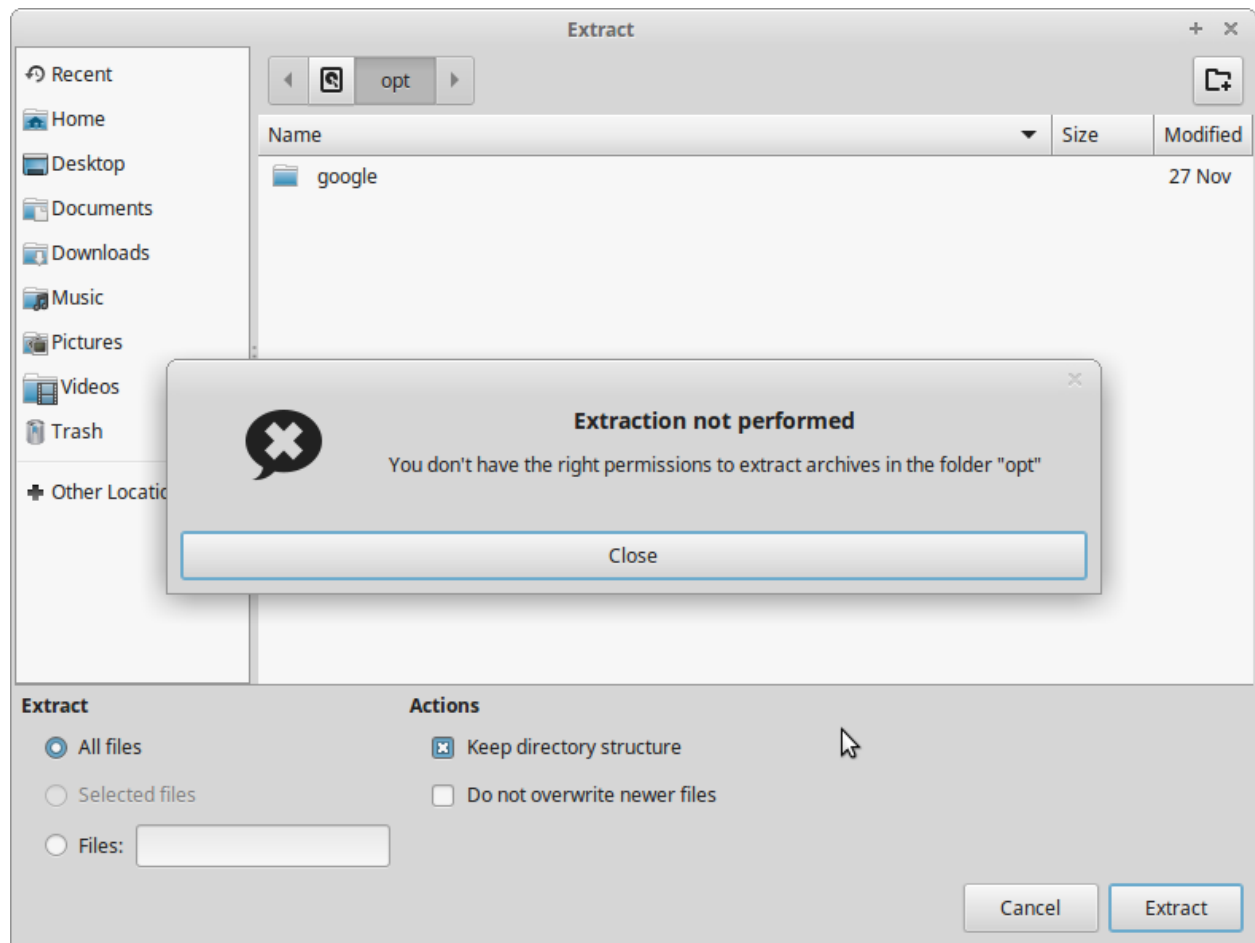

Extract it into /opt folder

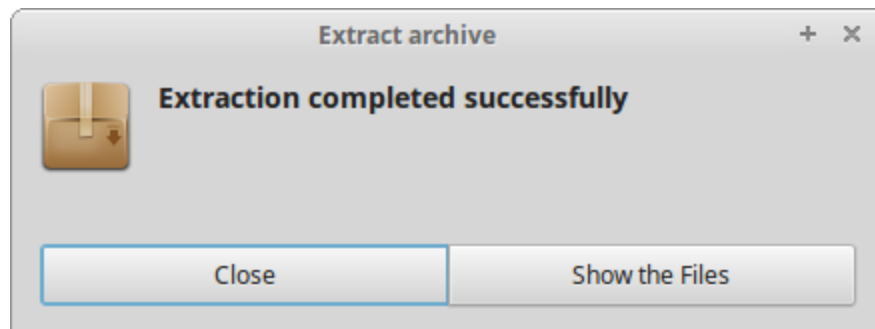

If extraction not permitted on ur /opt , give rw permission using the following command

```
sudo chmod a+rw /opt
```

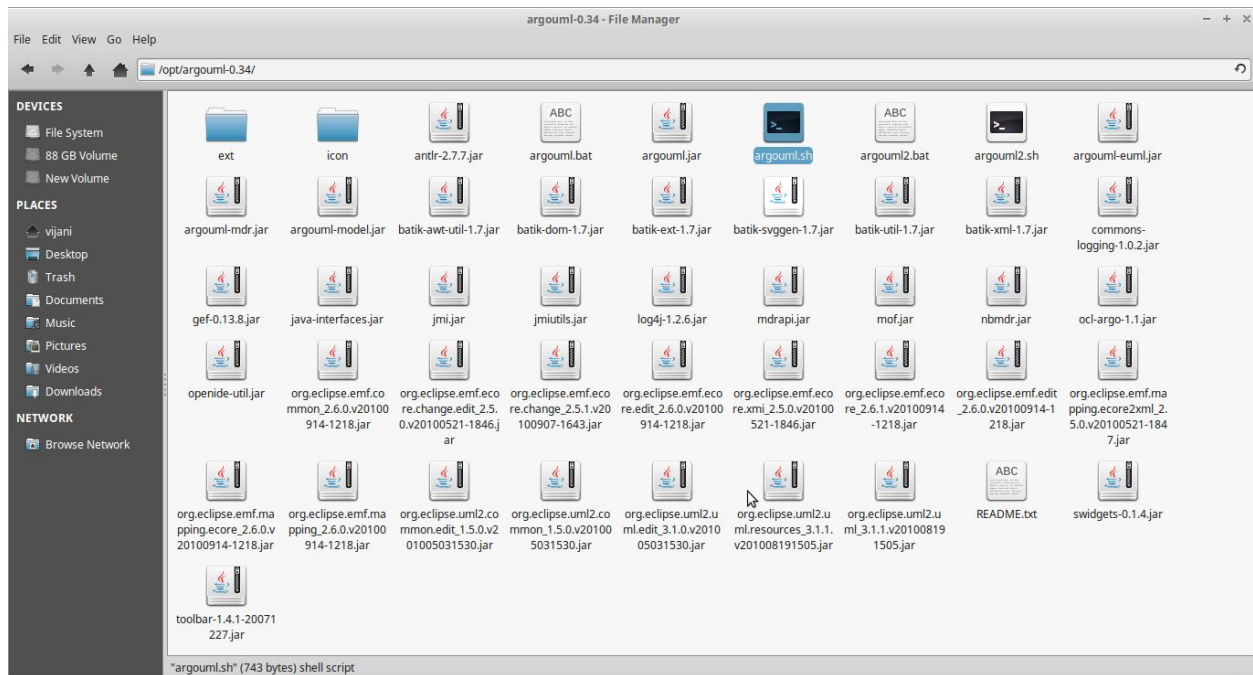

Then you can extract into opt folder

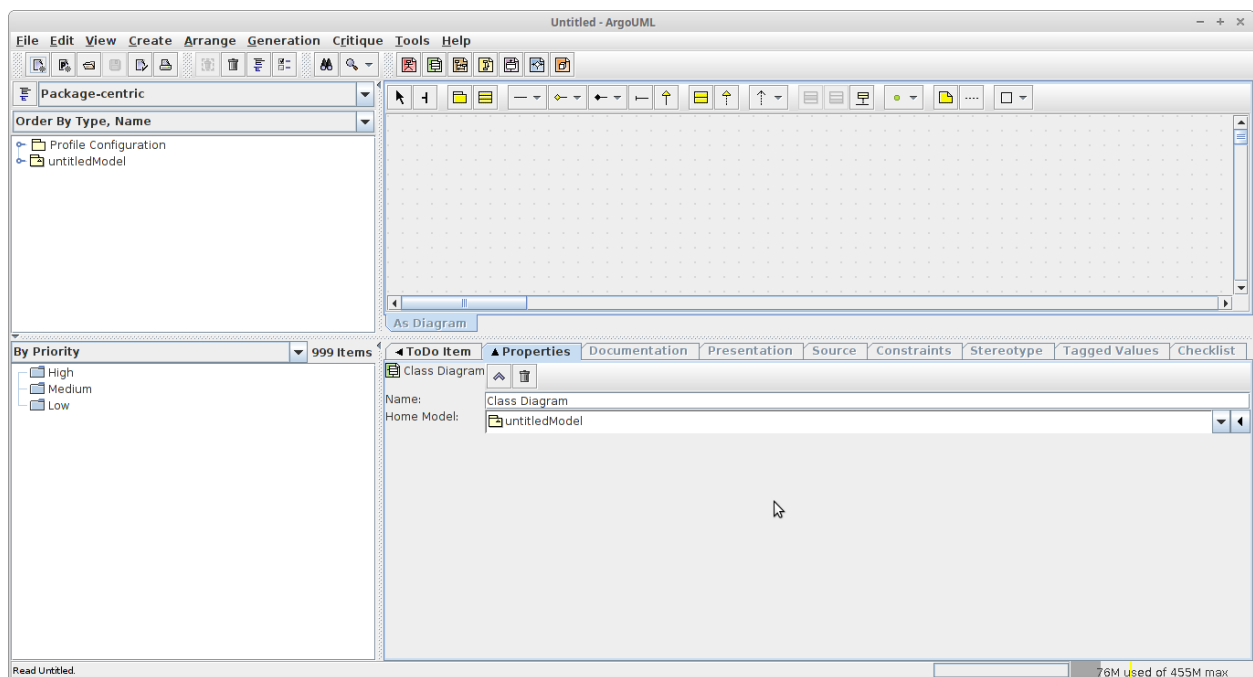

There is a file `argouml.sh` in folder `/opt/argouml-0.34/argouml.sh`
(**.sh file** is a shell script which you can execute in a terminal.
(like `.exe` in windows))

Open terminal inside folder `/opt/argouml-0.34/argouml.sh`
Give command `./argouml.sh` to open ArgoUML

Completed! That is ArgoUML where you can design any UML diagram using tools provided.

Enjoy software designing!
